

Press Release – ObjectSecurity announces OpenPMF 2.0 plug-in for Data Distribution Service (DDS)

(Cambridge/UK – 19 November 2007) – ObjectSecurity, the leading solutions provider and expert for model-driven enterprise security management, SOA security management, secure middleware, and secure information sharing in mission-critical industries today announced a new OpenPMF 2.0 plug-in for RTI Data Distribution Service (DDS).

OpenPMF 2.0 is the first generic Model Driven Security (MDS) technology in the world, and includes a fine-grained authorization management system. OpenPMF 2.0 is the only generic model-driven security management solution in the market today. OpenPMF 2.0 enables low-complexity and low-maintenance authorization management from within the Eclipse open source IDE. Model-driven security allows you to express consistent security requirements at an intuitive high level of abstraction (rather than at a technical level). OpenPMF 2.0 allows you to specify security requirements at an intuitive level, automatically enforce them across your entire IT environment, and monitor security activities – and all this inside Eclipse™ IDE. The cost-savings are significant because security complexity and policy maintenance are reduced to a minimum:

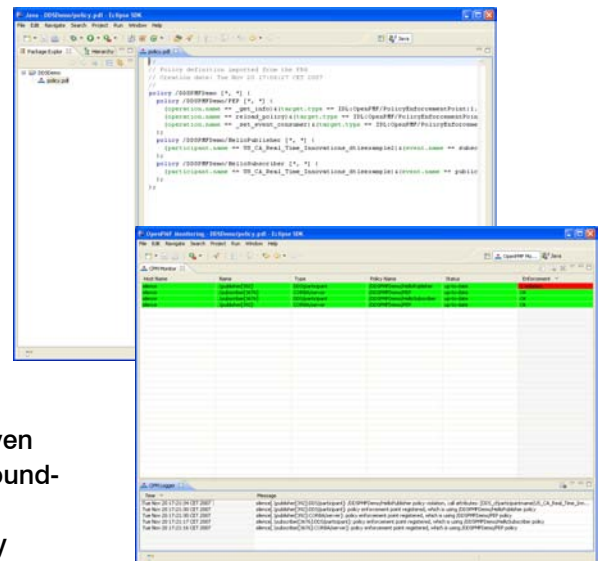

- ▶ Most flexible, intuitive policies - policy meta-models, governance/compliance
- ▶ Unique automatic policy generation using model-driven security
- ▶ Most flexible integration - on-demand plug-in development
- ▶ Intuitive, model-based usage inside the Eclipse™ IDE
- ▶ No vendor lock-in through modelling standards: EMF/UML etc.
- ▶ Low-maintenance security support for agile/ad-hoc/adaptive SOA
- ▶ No cost hurdle, no risk thanks to software rental option
- ▶ Fail-safe design for high robustness
- ▶ Support of organisational structures
- ▶ Software development (MDA) tool support inside Eclipse™ IDE

OpenPMF 2.0 plug-in for RTI DDS – OpenPMF 2.0 can now be used for authorization management for Data Distribution Service (DDS). A demonstrator has been developed in collaboration with Real Time Innovations, Inc, (RTI), a Santa Clara, CA, USA, based DDS middleware vendor. The current demonstrator allows the specification of identity-based policies for publishers and subscribers, and the runtime monitoring of violations. All this is done in a central, consistent, Eclipse-based GUI. Thanks to the OpenPMF 2.0 toolkit approach, additional, richer, customer-specific policies can be easily supported. Further collaboration with RTI is envisaged to extend this functionality.

About ObjectSecurity - ObjectSecurity Ltd. is a Cambridge (United Kingdom) and San Jose (CA, USA) based world-leader in model driven security and authorization management. The company offers the ground-breaking model-driven OpenPMF enterprise security management ecosystem and various secure middleware platforms. ObjectSecurity provides services for model driven security, middleware security, SOA security, secure information sharing (e.g. CDM). Their customer base includes telecoms, air traffic management, airports, defense, e-commerce, banking, and transport systems. ObjectSecurity specializes on information security for complex IT environments in mission-critical markets.
