

Press Release – ObjectSecurity Partners with Secerno to Provide Enhanced Policy-Driven Database Security Solutions

(Cambridge/UK, Oxford/UK – 22 September 2008) – ObjectSecurity, the leading solutions provider for model-driven security management and secure information sharing in mission-critical industries such as air traffic control, today announced that they have signed a partnership agreement with Secerno, the award-winning provider of database activity monitoring and blocking solutions that deliver comprehensive database security, with zero false positives.

The partnership combines the complementary products and solutions from both companies: ObjectSecurity offers OpenPMF, an innovative “model-driven” IT security policy management product, while Secerno’s range of hardware and virtual appliances provides database activity monitoring and database activity blocking to organisations worldwide.

The partnership allows OpenPMF customers to regulate data interactions across a range of databases thanks to Secerno’s database security enforcement. Similarly, Secerno customers benefit from the ability to integrate database security with their organisation’s wider security infrastructure via OpenPMF’s simplified security policy management for multiple security systems.

Dr. Ulrich Lang, CEO and co-founder of ObjectSecurity commented: “We are excited to partner with Secerno. The partnership allows us to leverage OpenPMF security enforcement for many data layer technologies via Secerno.”

Peter Simpson, VP Alliances at Secerno, added: “In today’s environment security systems, like all computer systems, should be interconnected. Partnering with ObjectSecurity will allow OpenPMF customers to centrally define policies for their enterprise security systems as well as having Secerno’s market-leading database security product monitor and enforce security policy on all database access – accurately, and without fear of false positives.”

Ends

ABOUT OBJECTSECURITY – ObjectSecurity is a Cambridge (United Kingdom) and Palo Alto (CA, USA) based world-leader in model driven security management and authorisation management. The company offers the ground-breaking model-driven OpenPMF product to simplify enterprise security management, and various secure middleware platforms. ObjectSecurity provides services for model driven security, middleware security, SOA security, secure information sharing (e.g. CDM). Their customer base includes Agilent Technologies, BAA Heathrow Airport, Deutsche Telekom, ESG, European General Electric, Intel, Lufthansa Systems, QinetiQ, Royal Bank of Scotland, Real-Time Innovations, Twinsoft/Hewlett-Packard, US Naval Research Lab and others. ObjectSecurity specialises on information security for complex IT environments in mission-critical markets. www.objectsecurity.com

ABOUT SECERNO – Award-winning Secerno provides the world's most advanced, comprehensive and intelligent database security solution. Secerno.SQL protects data at the point at which it is accessed and delivers the highest levels of protection against internal and external threats, optimises compliance auditing and delivers the ability to improve the security of applications.
